

**ABSTRACT OF THE DISCLOSURE**

A multi-domain liquid crystal display device includes: first and second substrates opposing each other; a plurality of gate lines and data lines on the first substrate lengthwise and crosswise, to define a pixel region; a common auxiliary electrode on a layer equal to the gate lines to surround the pixel region; a gate insulating film on the first substrate; a passivation film on the gate insulating film including the first substrate; a pixel electrode in the pixel region; a light-shielding layer on the second substrate; a color filter layer on the light-shielding layer; a common electrode on the color filter layer; a plurality of electric field distortion dielectric structures patterned in different forms within neighboring pixels; an alignment film on at least one of the first and second substrates; and a liquid crystal layer between the first substrate and the second substrate.
